

## LightSystem<sup>SM</sup> and LightSystem XGLO

### Broadband Video. Fiber Channel. ATM. Gigabit Ethernet. 10 Gigabit and Beyond.

What applications will your company be running 5, 10 or 20 years from now? The demand for bandwidth has been increasing exponentially over the past several years, driving the development of faster premise networks. Ethernet technology, which supports transmission rates of 1000 Mb/s (1 Gb/s) is available today. New bandwidth intensive data and multimedia applications along with faster, higher capacity LAN equipment will continue to demand more from cabling systems. The Siemon Company's LightSystem<sup>SM</sup> and LightSystem XGLO are complete end-to-end [fiber optic solutions](#) for today's requirements and demands well into the next millenium.

All the products that form Siemon's LightSystem<sup>SM</sup> and LightSystem XGLO cabling systems are designed for ease of installation, optimum reliability, maximum bandwidth and proven transmission distance.

### The Warranty that Goes the Distance

Siemon's LightSystem<sup>SM</sup> and LightSystem XGLO cabling systems use the highest-quality, most advanced fiber cables and connecting hardware. Siemon Certified Installers are highly trained based on the latest industry standards to ensure the most reliable installation available. Best of all, The Siemon Company holds the entire warranty - covering all connecting hardware, cable, installation and applications - so you have one point of contact. **LightSystem<sup>SM</sup> and LightSystem XGLO will stand the test of time. Guaranteed.**

#### Warranty Features:

- Warranty coverage 100% backed by The Siemon Company - with one primary point of contact
- Comprehensive horizontal and backbone coverage of fiber products, installation and applications
- Two of the strongest warranties in the industry - 16 years for LightSystem<sup>SM</sup> and 20 years for LightSystem XGLO

**Fiber Solutions for the Future...Today.**
